

POSTERS LIST

P-1 | Biocatalytic cascade to piperazines from amino acids using a decarboxylase and imine reductase.

Benjamin Aberle, *University of Stuttgart*

P-2 | Biocatalytic strategies for mild nitration reactions.

Matteo Aleotti, *Univeristy of Graz*

P-3 | State-of-the-art computational technology for enzyme engineering.

Lur Alonso, *Zymvol Biomodeling SL*

P-4 | Multinuclear titanium complexes for catalytic transformations.

Elena Álvarez Ruiz, *Universidad de Alcalá*

P-5 | Toward scalable biocatalytic conversion of 5-hydroxymethylfurfural by galactose oxidase using coordinated reaction and enzyme engineering.

William Birmingham, *University of Manchester*

P-6 | Unravelling melanin protective action through the photo physics of 5,6-indoloquinone.

Marco Bortoli, *Universitat de Girona*

P-7 | Fingerprint-based deep neural networks can model thermodynamic and optical properties of eumelanin DHI dimers.

Daniel Bosch, *IQCC*

P-8 | Engineering amine dehydrogenases (amdhs) for the synthesis of vicinal amino alcohols.

Ruth Bradshaw Allen, *University of Manchester*

P-9 | Q-Repex: A python pipeline to increase sampling of EVB simulations.

Sebastian Brickel, *Uppsala University*

P-10 | Padr proteins as scaffolds for artificial enzyme design.

Bart Brouwer, *University of Groningen*

P-11 | Looking for echoes of the past: reconverting an hydroxynitrile lyase to an arylesterase.

Guillem Casadevall, *Universitat de Girona*

P-12 | Controlling enzyme conformational dynamics: a key aspect in biocatalytic processes.

Christian Curado Carballada, *Universitat de Girona*

P-13 | LmrR-based artificial enzymes towards a greener chemistr.

Claudia Da Settimo Passeti, *University of Groningen*

P-14 | Oxygen evolution reaction mechanism on bismuth vanadate using photocatalysis.

Denis Diatlov, *Universitat de Girona*

P-15 | Computational evaluation and design of new hg-series kemp eliminases.

Akram Doustmohammadi, *Institut de Química Computacional i Catàlisi*

P-16 | Role of excited-state aromatic molecules in fluorescence imaging.

Ouissam El Bakouri, *Universitat de Girona*

P-17 | Global and local aromaticity of (sub)phthalocyanines.

Sílvia Escayola, *Universitat de Girona*

P-18 | Computational Exploration and Design of new Halohydrin Dehalogenase variants.

Miquel Estévez Gay, *Universitat de Girona, IQCC*

P-19 | Simulation of electronic excitation in biomedical systems. Photophysical properties of α and β porphyrins.

Judit Gálvez, *IQCC*

P-20 | Lactamases for the biohydrolysis of chemically stable lactams.

Somayeh Gandomkar, *University of Graz*

P-21 | Differences in protonation states of distal residues alter enzyme-ligand binding pathways in molecular dynamics simulations.

Helena Giramé Rizzo, *Universitat de Girona*

P-22 | Synthesis of 1,2-amino alcohols, diols, and diamines through cascade approaches employing gold(i) catalysts and enzymes

Sergio González Granda, *University of Oviedo*

P-23 | A metagenomic panel of limonene epoxide hydrolase enzymes for the synthesis of chiral vicinal diols.

Bethany Hogg, *University of Manchester*

P-24 | Hydroxylation insights into the unique mid-chain regioselective nature of cyp116b46.

Bethan Jones, *University of Manchester*

P-25 | H₂ and n₂ binding affinities are coupled in synthetic Fe nitrogenases limiting N₂ fixation.

Joseph Kfoury, *Budapest University of Technology and Economics*

P-26 | The evolution of the histidinolphosphate phosphatase in gamma-proteobacteria.

Thomas Kinateder, *University of Regensburg*

P-27 | Anti-Markovnikov oxidation of unactivated, aliphatic alkenes by directed enzyme evolution.

Cindy Klaus, *Bielefeld University*

P-28 | Iminium catalysis with artificial enzymes.

Reuben Leveson-Gower, *University of Groningen*

P-29 | Exploring the fluxional behavior of bioinspired artificial receptors with md simulations.

Ricard López Coll, *University of Girona*

P-30 | Re-tasking of carboxylic acid reductase for amide bond formation.

Max Lubberink, *University of Manchester*

P-31 | Allosteric regulation of the catalytic site of f1-atpas.

Dhani Ram Mahato, *Institut de Química Computacional i Catàlisi*

P-32 | Understanding semi-quinone disproportionation reaction in eumelanin oxidative polymerization.

Anju Manickoth, *University of Bern*

P-33 | Creation of fusion proteins to yield bifunctional efficient biocatalysts with enhanced conversion rate.

Valentina Marchini, *Universität Bern*

P-34 | Directed evolution of an artificial alkane hydroxylase using fluorescence-assisted droplet sorting.

Iori Morita, *University of Basel*

P-35 | Combining bio- and organocatalysis for the synthesis of piperidine alkaloids.

Adam O'Connell, *University College Dublin*

P-36 | Selection of chemically-upgraded macrocyclic peptides by phage display.

Titia Oppewal, *University of Groningen*

P-37 | Enantioselective aliphatic c-h hydroxylation with biologically inspired oxidation catalysts.

Andrea Palone, *UdG*

P-38 | The n-terminal helix-turn-helix motif of transcription factors mar-a and rob drives DNA recognition.

Antonietta Parracino, *Uppsala University*

P-39 | Computer-aided (re)design of enzymes for therapeutics.

Daniel de Jesús Platero Rochart, *Medical University of Graz*

P-40 | Computational study of the reductive carboxylation mechanism in crotonyl-CoA carboxylase/reductase.

Rodrigo Recabarren, *University of Concepción*

P-41 | Ruta – from uracil catabolism to biocatalysis?

Sebastian Roth, *University of Graz*

P-42 | Effect of dual phosphorylation on the activation mechanism of erk2: computational insights.

Ahmed M. Rozza, *Budapest University of Technology and Economic*

P-43 | Reductive aminases (redams) for the regio- and enantioselective reductive amination of diamine.

Arnau Rue Casamajo, *The University of Manchester*

P-44 | THz spectra of confined water.

Sergi Ruiz Barragan, *Universitat de Girona*

P-45 | Computational design of new thymidine kinases for suicide cancer gene therapy.

Janet Sánchez Hernández, *Institut de Química Computacional i Catàlisi*

P-46 | Selective alkyne cyclotrimerization catalyzed by low valent titanium compounds.

Ignacio Sancho, *Universidad de Alcalá*

P-47 | Exploring the co-immobilization of multi-enzyme system to scale up step-wise biotransformations.

Francisco Javier Santiago Arcos, *CIC biomaGUNE*

P-48 | Enforcing substrate pre-folding for cyclization through alternative active site confinement.

Kristina Schell, *Institute for Biochemistry and Technical Biochemistry*

P-49 | Accessing nature's terpenome via complementary cationic cyclization cascades.

Andreas Schneider, *Institute for Biochemistry and Technical Biochemistry*

P-50 | Rational Protein Design of Bacterial beta-Etherases to Identify Catalytic Key Residues.

Margarita Seeger, *Technische Universität Braunschweig*

P-51 | Human proteasome inhibitors: Activity cliff within the γ -lactam - β -lactone inhibitors family.

Natalia Serrano Aparicio, *Universitat Jaume I*

P-52 | Homospermidine synthase from *Blastochloris viridis* enables synthesis of pyrrolizidine and indolizidine alkaloids.

Joseph Sharratt, *University of Manchester*

P-53 | Nido...cage π and cage...cage - interactions: new non-covalent interactions.

Miquel Solà Puig, *Universitat de Girona*

P-54 | Rational design of p450-based enzymatic platform for the regioselective hydroxylation of decanoic acid.

Jordi Soler, *IQCC*

P-55 | The influence of cosolvents on biocatalyst stability.

Frieda A. Sorgenfrei, *University of Graz*

P-56 | Addressing stereoselectivity in the high-throughput screening of upo catalyzed hydroxylation.

Alexander Swoboda, *Institut of chemistry*

P-57 | Acoustic Mist Ionization-Mass Spectrometry Enables High-Throughput Screening of Engineered BVMOs for Manufacturing of ATR Inhibitor Ceralasertib.

Michele Tavanti, *AstraZeneca*

P-58 | What molecular modelling could bring in the design of chimeric streptavidin for dual gold catalysis.

Laura Tiesser Sala, *Universitat Autònoma de Barcelona*

P-59 | Three-shell supramolecular complex enables the symmetry-mismatched chemo- and regioselective bis-functionalization of c60.

Ernest Ubasart, *IQCC UdG*

P-60 | Biocatalysis with designer enzymes featuring thiol-containing unnatural amino acids.

Mathijs Veen, *University of Groningen*

P-61 | Modular photosynthetic cofactor-recycling platform unlocking water as electron source for biocatalytic redox reactions.

Florian Weissensteiner, *Universität Graz*

P-62 | A Deep Unsupervised Model for Protein Design.

Noelia Ferruz, *University of Girona*
